

**MILWAUKEE EYE CARE ASSOCIATES, S.C.**  
**Refraction Fees**

**WHAT IS REFRACTION?**

---

The **refraction** is the part of the exam in which the doctor or technician uses lenses to determine which eyeglass prescription gives you the best vision. This information may be used to prescribe eyeglasses or to help the doctor decide what impact any eye disease is having on your vision.

**DOES INSURANCE COVER THIS TEST?**

---

Many insurance companies do not pay for this portion of the eye exam. They call it a non-covered service. **Medicare** never pays for the **refraction**, and most supplementary insurances follow suit. Many commercial insurance companies that include a separate Vision Plan for their subscribers do cover the **refraction**.

**IS PAYMENT DUE TODAY?**

---

If we know that your insurance will not cover the \$35.00 **refraction** fee, then we will ask for payment at the time of service to minimize the need for and expense of billing you. I understand that I am responsible for the refraction fee if my insurance does not cover it.
